SAIL DATABANK

Information for
Data Managers & Controllers

Public data for public good

There is now a consensus amongst those working across health and public policy, that by harvesting and analysing population data we can achieve great benefits for society; public data for public good. Conversely, it is widely recognised, that the non-use of such data can have proven, adverse effects on society's wellbeing.

The SAIL Databank consumer panel and wider public engagement ensures that the public are always involved in our decision making processes. From this we gain valuable insights from the lay-person's perspective so that all research conducted using SAIL Databank is in the public interest.

Robust Governance you can trust

Our ISO 27001 certified and UK Statistics Authority accredited environment navigates the rigorous legal and regulatory framework surrounding the use of person-based data. SAIL Databank reduces the risk to researchers associated with collecting, storing and analysing sensitive data.

A truly valuable resource boosting the local economy

SAIL Databank has been pivotal in positioning Wales as a world leader in the field of Population Data Science. A valuable asset for Wales and the Welsh economy, SAIL Databank facilitates a multidisciplinary approach to developing, testing, evaluating and implementing public health interventions.

Recognised as a Centre of Excellence within Swansea University we are a world class enterprise that collaborates with other world leading institutions and researchers. Our program of student internships also ensures that we make a valuable contribution to the next generation of data scientists, helping to securing a bright future for population data research.

A cornerstone of Swansea University's Medical School positioned at the forefront of Wales' world beating proficiency in the field of Population Data Science.

Secure Anonymised Linkable

Using a straightforward but robust process for uploading data, SAIL Databank enables public bodies, like the NHS and Office for National Statistics, to tap into and reap the benefits of their own data, thereby improving the lives of patients and the wider public. Our robust process allows you to place specific conditions on your data when accessed by researchers. These controls are further enhanced by our consumer panel and independent Information Governance Review Panel. By making your own data work for you we facilitate evidence based policy-making, resulting in better strategic decisions and economically robust policies.
